-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Steigerwald et al. article in view of JP6319986.

The applied Steigerwald article teaches that it is known in the art to make and use particles comprised of two elements wherein such particles are structured in a reversed micelle solution. It also teaches that the method produces structure having hollow spacing between crystallites and that such structure can be shaped and grown. The whole article is relevant.

The Steigerwald does not specifically teach that such particles are hollow. However, the JP6319986 discloses that it is known in the art to make hollow spherical fine particles.

It would have been obvious to one having ordinary skill in the art at the time of the invention to make hollow structured fine particles using the method of Steigerwald as suggested by JP'986

Art Unit: 1794

and to optimize composition and size of such particles since such would improve final mechanical and chemical properties of such particles.
